

SA 210 S10

Make the transition to the Solaris 10 Operating System

Summary

Duration

3 Days

Vendor

Sun

Introduction

The Make the Transition to the Solaris 10 Operating System course presents the essential differences between the Solaris 8, Solaris 9 and Solaris 10 Operating Systems. The course covers skills and tasks that are new or are changed in Solaris 10. The course also covers tasks in Solaris 10 that replace previous Solaris tasks. This course is intended to provide experienced Solaris 8 and Solaris 9 systems administrators with practical experience administering Solaris 10 through hands-on practice and focuses on many of the objectives necessary to prepare them to take the Sun Certified System Administrator for the Solaris 10 Operating System Upgrade Exam (CX-310-203).

Prerequisites

To succeed fully in this course, students should be certified system administrators on the Solaris 8 or Solaris 9 operating systems.

Objectives

Upon completion of this course, students should be able to:

- Administer the Service Management Facility
- Install the Solaris 10 OS
- Install Software in the Solaris 10 OS
- Manage Solaris 10 OS patches and updates
- Perform user and security administration in the Solaris 10 OS
- Manage processes in the Solaris 10 OS
- Describe networking basic in the Solaris 10 OS
- Manage virtual file systems and core dumps in the Solaris 10 OS
- Manage storage volumes in the Solaris 10 OS
- Control system access in the Solaris 10 OS
- Configure system messaging in the Solaris 10 OS
- Set up naming services in the Solaris 10 OS
- Perform advanced installation procedures like jumpstart and flash installation in the Solaris 10 OS
